Systematic Reviews

[Risk factors for suicide in prison](#)

Summary of an updated systematic review on risk factors for suicide in prison. The strongest risk factors identified were suicidal ideation, previous suicide attempt, history of self-harm, single-cell occupancy, and current psychiatric diagnosis.

[Psychotherapies for suicide and self-harm in young people](#)

Summary of a review on the comparative efficacy and acceptability of psychotherapies for self-harm and suicide in young people, which highlights continued uncertainty in the field.

Studies

[Do suicide awareness campaigns reduce stigma and increase help-seeking?](#)

This post reviews a Dutch study exploring the impact of a suicide prevention awareness campaign on stigma, taboo and attitudes towards professional help-seeking.

[Disclosing self-harm history: people's attributes and risk factors](#)

This review of a recent study from Manchester explores characteristics and risk of repetition in people who fail to report previous hospital presentations for self-harm.

['Wasn't offered one, too poorly to ask for one' – Reasons why some patients do not receive a psychosocial assessment following self-harm: Qualitative patient and carer survey](#)

This study's results provide insights into some of the reasons why some people may not receive a psychosocial assessment following self-harm.

['Relieved to be seen'—patient and carer experiences of psychosocial assessment in the emergency department following self-harm: qualitative analysis of 102 free-text survey responses](#)

This paper's findings highlight important patient experiences that can inform service provision and they demonstrate the value of involving patients/ carers throughout the research process.

Webinar

[Suicide and Self-Harm Research Expertise North West \(SSHARE NoW\) Webinar](#) [16th June 2021 12:00pm – 14:30pm](#)

Registration is now open for this event run by the Manchester Self Harm Project. The theme for the webinar will be around intervention and access to support.
