Systematic Reviews

[Aerobic physical activity to improve memory and executive function in sedentary adults without cognitive impairment: A systematic review and meta-analysis](#)

This systematic review found that aerobic physical activity may improve memory and executive function in sedentary adults without cognitive impairment.

[The effect of COVID-19 isolation measures on the cognition and mental health of people living with dementia: A rapid systematic review of one year of quantitative evidence](#)

This review found that COVID-19 isolation measures have damaged the cognitive and mental health of people with dementia across the world.

Report

[WHO Launches its global status report on the public health response to dementia](#)

The Global status report on the public health response to dementia takes stock of actions driven by Member States, WHO and civil society since the adoption of the global action plan, identifies barriers to its implementation especially in light of the COVID-19 pandemic, and highlights areas where urgent, accelerated action is required.

Guidance

[Coronavirus \(COVID-19\) testing in adult care homes](#)

Updated 'Care home COVID-19 testing guidance for regular and outbreak testing of staff and residents' to reflect changes to self-isolation guidance.

Webinar

[World Alzheimer Report 2021: Launch Webinar, 21 September](#)

The World Alzheimer Report 2021 will focus on the crucial and timely subject of diagnosis. The report includes over 50 essays from leading experts around the world and is supported by findings from 3 key global surveys.
